

# Fall-Protection

## Shoring Platform, Telescoping Walkway, & Davit Mast

### Access/Egress Shoring Platform:

OSHA requires walkways and guardrails when crossing over excavations 6 feet or deeper. The BTRENCHSAFE® *Shoring Platform and Telescopic Walkway* provides a safe means of access and egress to and from the excavation. The shoring platform with ladder bracket provides users with three points of contact at all times.

### Rescue/Retrieval Davit Kit:

The BTRENCHSAFE® Rescue/Retrieval *Davit Kit* comes with a Type-3 self-retracting lifeline (SRL), materials winch, and adjustable base for mounting on trench shield sidewalls or Slide Rail panels, providing a safe means of extraction of personnel out of excavations and trenches.
